Your benefits from our expertise

- Up-to-date information on all index components as well as all rules, regulations and index profiles are conveniently available for our clients on our website.
- Our extensive cooperation network in the region and our many years of experience as index experts are the foundation of our expertise.
- All of our indices are in conformity with international and EU quality standards. These include the EU Benchmark Regulation, the Principles for Financial Benchmarks of the International Organization of Securities Commissions (IOSCO) and the provisions of the Undertakings for Collective Investments in Transferable Securities Directive (UCITS) therefore ensuring maximum investor protection.

The Vienna Stock Exchange has a long tradition in calculating indices, starting with its first index in 1967 and enlarging its offering by new indices for the Austrian capital market in 1991. In the following years, the Vienna Stock Exchange created indices for Central and Eastern Europe (CEE) as well as for the Commonwealth of Independent States (CIS). The Austrian exchange was one of the first index providers with a wide range of reliable and transparent indices for Emerging Europe designed to serve as underlying instruments for structured products and derivatives.

Quality leader in indices for this region

The Vienna Stock Exchange provides stock market coverage from Austria in the west all the way to Kazakhstan in the east. In the fields of indexing and data vending it cooperates with several local stock exchanges, but also acts as a sales agent for the indices of the Prague Stock Exchange (PX, PX-GLOB, PX-TR, PX-TRnet and PX-START) and the Ljubljana Stock Exchange (SBITOP and SBITOP TR).

High Potential for Investments

Central and Eastern Europe is the most promising emerging region in Europe. According to the IMFs World Economic Outlook, the annual GDP growth rate in Emerging Europe exceeded on average 2.7% between 2017 and 2023. This depicts an outdoing of up to 2.3 percentage points versus other developed markets, such as the Euro Area, Japan or the US.

Even considering the past few years of economic uncertainties, the indices of the Vienna Stock Exchange have proven to be solid grounds for investment, shown by a growth of 23.5% of the ATX. The Austrian market offers a remarkable concentration of value stocks, enabling investors to benefit from stable returns and low risks even in difficult times. Apart from that, domestic companies can profit significantly from excellent Eastern European countries, as their GDP is expected to grow by 2.5%, according to the wiiw's January 2024 Winter Forecast.

Covering a large part of this region, the CECE Index offers an easy option to participate in this promising development. The index advanced more than 36% in 2023. Mirroring the Romanian stock market, the ROTX performed equally great, considering its growth of 30.5% in the same period. Their high dividend yields, relatively low prices and stable supply chains make Central and Eastern European economies attractive options for domestic companies and investors alike.

Additionally, the Vienna Stock Exchange offers the KTX, covering Kazakhstan. The index is attractive due to its high dividends and low equity prices resulting in a growth of 275% since the end of 2015 and more than 110% since the end of 2019 until the end of 2023.

	est. Dividend Yield	est. PE Ratio	Performance since end 2015
CECE	5.30	7.28	29.70%
ATX	5.78	7.31	43.31%
ROTX	7.58	7.14	121.27%
FTSE 100	4.27	11.01	5.29%
Topix	2.42	13.78	28.21%
STOXX Europe 50	3.74	12.83	32.03%
S&P 500	1.50	19.48	129.64%

One-Stop-Shop for Indices Covering 14 Stock Markets

Our indices are an attractive underlying for financial products. Over 140 financial institutions worldwide place their trust in our profound knowledge and make use of our indices. The Vienna Stock Exchange currently calculates more than 130 tradable indices on countries, sectors, regions and various investment themes and styles.

In response to specific investment needs, the Vienna Stock Exchanges expanded its range of indices by introducing different theme and style indices. For example, short indices allow investors to participate on falling stock prices. By contrast, leverage indices are designed to permit participation in performance with a fixed leverage on upward trends. In fundamental indices, the components are chosen based on fundamental criteria such as return on assets, net dividend yield and price-to-book ratio as opposed to market capitalization. The top dividend indices consist of the companies paying out the highest dividend yield.

In addition to offering all indices in EUR, the Vienna Stock Exchange calculates the CEE and CIS indices in USD and

most local currencies. Further, in response to investors demand, the Vienna Stock Exchange created the most popular indices: the Total Return Indices and the Net Total Return Indices.

Austrian Indices

The ATX, the leading index of the Vienna Stock Exchange, includes constituents of the highest liquidity and capitalization in the Austrian capital market, while the ATX Prime, a classic sector index, includes securities listed on the prime market. The ATX five tracks the five stocks with the highest weightings in the ATX, thus representing the corporations that account for most of the trading volume. The IATX focuses on real estate stocks listed on the prime market. The WBI is the oldest index of the Vienna Stock Exchange. It is an all-share index that was launched in 1967 and is still being computed.

VÖNIX – the Austrian sustainability index – is comprised of Austrian companies, which are leaders in social and environmental achievements.

Country Coverage – Regional Segmentation

Emerging Europe

The indices of the Central, Eastern and Southeastern European region constitute one of the Vienna Stock Exchange's core areas of competence. The CECE is the composite Eastern European index comprising Hungarian, Czech and Polish stocks. The CECEX covers nearly all Eastern European capital markets and thus allows for a wide diversification. NTX is a blue chip index for CEE which also includes Austrian shares.

Three of the newest additions to the Vienna Stock Exchange's portfolio of Indices are the CECE Reshoring, CECE Commodity and CECE Clean Energy. CECE Reshoring consists of companies that could benefit from supply chains moving to safer regions with attractive production conditions. The CECE Commodity contains hard and soft commodity producers from CEE countries. The CECE Clean Energy is composed of Austrian as well as Eastern European companies that use low emission energy production. Additionally, the CECE Infrastructure Index focusses on companies that provide infrastructure to a region or economy.

CECE SRI is focused on the subject of ecology and in accordance with strict guidelines. It tracks the best companies operating in the region. CECE Soft gives investors the opportunity to participate in the exceptional upside potential of the IT sector in Eastern Europe.

More sector indices are available for the Emerging Europe region such as the CECE Health Care or CECE Telecommunication Index, which provide opportunities for target-oriented investments. The UTX allows access to the Ukrainian market. The broadest index, EETX, is designed as a benchmark for funds. It complies with UCITS standards for portfolio diversification. The KTX emerged from a cooperation project with the Kazakh Stock Exchange and permits investments in the Kazakh market.

Customized Indices: The Flexible Solution

Over the years, customized indices have become an inseparable part of the financial world. The special needs regarding different types of clients and individual product designs have created demand for investment products to meet these specific requirements.
